## Objective

A highly motivated individual looking for an opportunity to start developing software with a company that values a self taught and independent worker with strong problem solving skills and a big passion for computer science.

## EDUCATION

### Diploma in Computer Engineering Technology (2019 - 2021)

**Northern Alberta Institute of Technology:** studies included a wide range of programming skills from full stack web development to embedded systems and building small electronics. Theory like design patterns, algorithms, database design were taught with an emphasis on real world application. Skills like troubleshooting, version control and unit testing were learned over trial and error allowing for a deeper understanding of how the tools work. Studies were modeled with Independent learning making it an easier transition into the real workforce.

Languages I chose to use: C#, C++, Java, C, Python, Javascript, Php.

## WORK EXPERIENCE

**IT Technician - for Cathlic Social Services (Summer 2020):** This job was a summer student position. They wanted me to spend the entire summer upgrading all their old systems to windows 10, so I created a bash script to automate the process and finished within a month. My responsibilities then shifted to driving across Alberta and servicing group homes for remote services.

**Secondary IT Technician - for Broked Computers (2015 - 2021):** An on and off job with a mentor from church, here I learned the fundamentals of Linux for both servers and personal use. Responsibilities included developing software solutions when needed using a variety of web frameworks and APIs as well as developing bash and powershell scripts to help automate the boring stuff.

**Door To Door Salesman - for Combined Insurance (Summer 2019):** There is nothing like going up to a person's house and talking to them about insurance, even though I would never do this job again this experience gave me strong communications skills.

## VOLUNTEER WORK & EXTRACURRICULAR ACTIVITIES

**High school Esports Club - Lindsay Thurber Highschool (2017 - 2019):** In grade 11 I started a ESports club with the help of the librarian, the goal of the club was to make a community in the school to represent the nerdier kids. I put alot of hard work into it including building the computers and making a proposal to the school board for the club and its still successfully running.
